

Balustrade Design Inspiration:

Our frameless glass balustrades maximise the perception of space through a modern minimalist appearance. Glass balustrades are perfect for retaining views for staircases, balconies and decks. For added safety and security we recommend using a Sentryglas® laminate so that you can retain a fully frameless look.**

Euroglass™ Frameless Glass Balustrades Selection Guide

Viridian
we ♥ glass

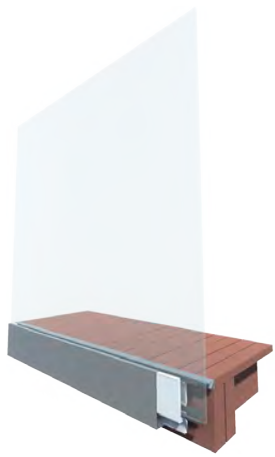

Balustrade Selection Process:

Our innovative balustrade systems are used to create an elegant deck, balcony, staircase, or pool area. Every system is custom designed to achieve a perfect solution that is specific to your site. It is then professionally fitted by our expert installers.

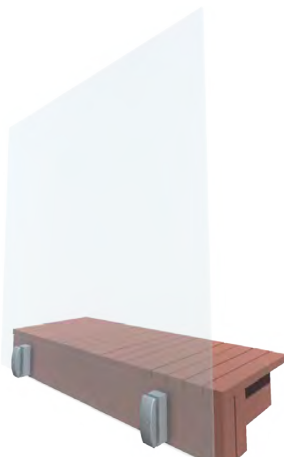

Don't know what to choose?

We have a team of technical experts ready to help. Talk to a Technical Representative today: 0800 847 434

Choose a system

Our experience and product range enables us to offer the best advice and the most innovative solutions available. There are many factors to consider when choosing a system. Lugano and Anzio provide a completely seamless look as they have no visible fixings. Alternatively Pradis, Euroanchor and Milano enable visibility of the complete structure.

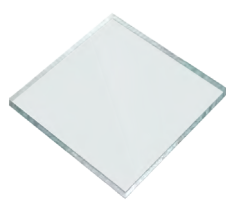

Choose your glass

For pure unobstructed views choose VFloat SuperClear™. Clearer than ordinary glass, it enables a seamless transition between the top of the glass and the views above. Or, to provide privacy and minimise sun exposure, choose VFloat™ Grey.

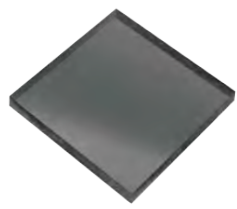

PixaGraphic™ digital printed glass enables you to add your own creativity and flair. Our digital glass printer ensures you can print any high resolution photograph or design directly onto the glass itself.

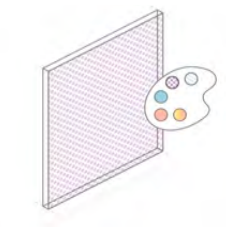

VFloat™ Clear
Standard glass

VFloat™ SuperClear™
Low-iron glass

VFloat™ Grey
Standard glass
with a grey tint

Choose your safety level

When choosing your glass balustrade, one key decision is the safety level of your glass. We have categorised these as Safe, Safer, and Safest.

We recommend all balustrades have a SentryGlas® laminate, as this is up to 5 times stronger and 100 times stiffer than traditional laminates. In addition, there may not be a need for additional hardware such as clamps or an interlinking rail attached to the glass. Overtime the laminate at the edge may become a milky-white colour, but this will not change the performance or transparency of the product.

Did you know?

You can powder coat your hardware accessories to any colour you would like. Black is the perfect choice for an industrial look.

Accessories needed for each glass option

Glass safety level	Glass Configuration	Interlinking Handrail	Gap clamps
Safe	Toughened Glass	✓	Cannot be used
Safer	EVA Laminate	✓*	✓*
Safest	SentryGlas®***Laminate	Not required**	Not required**

*Interlinking handrail or gap clamps can be used with EVA Laminated glass.
**Interlinking handrail or gap clamps may be required for specific systems. These will also be subject to council approval.
***SentryGlas® is a registered trademark owned by the Kuraray Group.
